

Choosing an appropriate mounting location

Choose a location which is high up as possible with the least amount of obstructions, including trees, large buildings, chimneys, etc.

Antenna Adapters/Connectors

Before installation, determine the style of antenna connector your equipment has:

<p>Screw-On “F” connector</p>  <p>This will not require any extra adapters to interface with the FanFare Antenna.</p>	<p>Push-On “F” Connector</p>  <p>This will require an adaptor. Screw-On to Push-On Adapter (pictured below)</p> 
<p>300 Ohm Connector</p>  <p>This will require an adapter. 75 ohm - 300 ohm Matching Transformer</p> 	<p>Cabling</p>  <p>Any RG-6, Indoor/Outdoor coax cable with “F” Connector ends will work. Choose the appropriate length for your installation. 50 Foot RG6 Cable</p>

Antenna Installation Instructions

1. Attach mounting bracket to desired location. Be sure that it is level as any angle will be exaggerated at the top of the antenna.

2. Insert Antenna body into the mounting bracket. Be sure to remove the nut from the threaded area first.

3. Install and tighten nut onto threaded area.

4. Install antenna adapter.

5. Attach coax cable to adapter.
